DESCRIPTION

Lory Diet is a complete food for adult parrots of the Loriini tribe (lories and lorikeets). It contains dehydrated apple and whole dried egg. It can be offered dry and/or mixed with water. Faecal consistency is improved when using the dry formula.

FEEDING RECOMMENDATIONS

When **Lory Diet** is offered mixed with water, add enough water to reach a creamy texture.

It is recommended to offer fruit and vegetables in order to provide variety to the diet. Renew feeder with fresh food and water daily. If the formula is offered mixed with water, prepare the right amount to be consumed in a short period of time to prevent it from spoiling.

Whenever chicks are present in the nest, it is advisable that the breeding pairs have **Frugivorous Neonatal Hand Feeding** or **Lory Special Hand Feeding** (depending on the chicks' age) also available.

No vitamin or mineral supplements should be given to parrots whose staple diet is **Lory Diet**.

Once the package is opened, store in an air-tight container in a cool, dry place.

DAILY INTAKE

As a guideline, these birds consume between 8 and 16 g of dry **Lory Diet** per 100 g of body weight daily.

Ambient temperature influences intake significantly.
