

Mini

DESCRIPTION

This product is intended for medium and small-sized parrots (like *Nymphicus*, *Eolophus*, *Aratinga*, *Platyercus*...) which in the wild consume mainly seeds with a low fat content.

It is a maintenance diet formulated to feed pet birds and breeding pairs during non-reproductive periods. Its composition meets the nutritional requirements of birds during this time.

FEEDING RECOMMENDATIONS

Mini is designed to constitute 100 % of the parrot's diet in non-reproductive periods. However, if fresh fruit and vegetables are provided daily to give variety to the diet, Psittacus Mini should constitute no less than 70-80 % of the overall diet by weight.

During breeding season, birds should always have access to **Psittacus Eggfood**, **Wet&Dry Microspheres 20/10** and **Calcium Grit Fine** as a source of calcium.

Ensure birds have **Psittacus Silex Grit** available to cover the mechanical needs of the digestive tract.

No vitamin or mineral supplements should be given to parrots whose staple food is **Psittacus Mini**.

Renew feeder with fresh food and water daily.

Once the package is opened, store in an air-tight container in a cool, dry place.

DAILY INTAKE

Daily intake ranges from 9 to 15 % of the bird's body weight. For instance, a cockatiel will consume close to 10 g/d. Ambient temperature influences intake significantly.
