Omega - Omega

DESCRIPTION

This product may be offered exclusively or as a complement to several psittacine birds of medium and large-sized species. It can be offered *ad libitum* to the genera *Ara*, *Psittacus* and *Poicephalus*. We recommend to restrict the amount in species that tend to gain weight such as those in the genera *Amazona*, *Cacatua*, *Psittacula*, *Eclectus*, etc. This extruded food is very palatable and has a high nutritional value.

It is especially recommended for stages when the parrots have greater nutritional needs (young parrots, parrots with nutritional deficiencies, etc.). In addition, it has been formulated paying special attention to the profile of fatty acids and the contribution of Omega 6 and Omega 3.

FEEDING RECOMMENDATIONS

It is formulated to constitute 100 % of the parrot's diet during non-reproductive periods. However, fresh fruit and vegetables may be offered to give variety to the diet. In this case Omega formula should constitute no less than 70-80 % of the total intake.

Offer fresh food daily.

No vitamin or mineral supplements should be given to parrots whose staple food is Omega formula.

Birds should always have plenty of fresh, clean water available.

Once the package is open, store in an air-tight container in a dry, cool place.

DAILY INTAKE

Daily intake varies between 5 and 10 % of body weight. Medium-sized species (for example, African Grey parrots) consume around 35-45 g per day.
