

Parrot Breeder

DESCRIPTION

This product is a versatile formula suitable for medium and large birds of the psittacidae family during their reproductive stage. It has been formulated to stimulate and facilitate reproduction, and to meet the increased nutritional requirements of birds during the reproductive stage. It contains high levels of protein with suitable amino acids as well as vitamins and antioxidants for this stage.

FEEDING RECOMMENDATIONS

It is designed to constitute 100 % of the parrot's diet. However, if fresh fruit and vegetables are offered daily to give variety to the diet, we recommend that Psittacus should constitute no less than 70-80 % of the overall diet by weight.

No vitamin or mineral supplements should be given to parrots whose staple food is Psittacus Parrot Breeder. In the case of reiterated and/or numerous clutches, we suggest that birds have available Psittacus Calcium Grit Coarse as a calcium source. Birds can regulated their calcium intake according to their needs.

Birds should always have plenty of fresh, clean water available.

Once the package is open, store in an air-tight container in a dry, cool place.

DAILY INTAKE

Birds daily intake ranges from 5 and 12 % of body weight per day in case of medium-sized species (for example, African Grey).
